# Universal Edge Platforms for the Cloud Native Enterprise

As operational, information, and communications technologies converge, accelerated by the virtualization of applications, the software defined, an AI-driven network infrastructure that promises to be extremely agile and reconfigurable is in the making. Advantech Network Appliances provide a solid and open foundation for service providers and enterprises to deploy agile and secure network services that break away from monolithic architectures. These scalable edge-to-cloud white boxes integrate the latest computing and networking technologies into optimized platforms that are widely deployed running popular SD-WAN, SASE, security and uCPE software from industry leading ecosystem partners. This flexible approach allows for disaggregated strategies that minimize supply chain risks and protect network investment, building an open and cloud-native infrastructure ready to enable microservices that scale from small branch offices and small-to-medium-sized businesses to enterprise and service provider networks.

## From SD-WAN to SASE - Anywhere Security for the AIoT Era

One of the main benefits of SD-WAN is the contextual awareness that it provides to software about the state of the WAN and connection quality. By providing this additional intelligence, software is able to re-route traffic on the fly in cases where connections between the on-premise equipment and cloud are down or degraded. In addition, centralized management provides a single-pane-of-glass view of the state of all devices on the WAN. But SD-WAN is just one piece of the broader WAN networking and security puzzle. In addition to SD-WAN, SASE provides features such as NGFW, IPS, CASB, DLP and SWG. With the entire network and security infrastructure delivered as a single cloud-native platform, enterprises benefit from increased visibility, fewer silos, and enhanced security. Cost-savings, versatility, and cloud-friendliness are key benefits of SD-WAN. SASE delivers those benefits as well as additional networking and security functionality to prepare the cloud-native enterprise for the AIoT era.

# Foster Innovation with Advantech Enterprise Edge Devices

## The Pioneer in White-box SD-WAN & uCPE

For over 30 years, the world's leading brands have chosen to embed Advantech computing platforms and IoT intelligent systems into their products, empowering Industry 4.0, building smart city and transforming the network infrastructure. As early-movers in new technologies such as AI, IoT, and SDN, Advantech helps co-create new business ecosystems that enable an intelligent planet.

Advantech's network appliances provide a range of innovative platforms needed by service providers to transform the network using new, disaggregated, AI-driven models. Advantech white boxes extend the cloud to the enterprise edge where technologies such as SD-WAN, AI, and FWA enable a converged edge architecture securely connecting people and things. Over 150 dedicated engineers design our networking products to address new market needs following strict quality design rules and test criteria. Certification and regional homologation services ensure products can be safely deployed globally. All of this is backed by a solid financial base and an extensive network of more than 8,500 employees globally. That is why we are the most trusted SD-WAN, SASE, and network edge hardware partner for service providers across the world.

## Edge to Cloud Scalability

Advantech's white box network appliance range, built on standard x86 processors in feature-flexible appliances, cover multiple configurations and price points scaling from 2 to 100+ cores providing maximum physically achievable throughputs up to 800+ Gbps. Optional networking modules offer a highly flexible WAN connectivity choice of hybrid 5G, 4G LTE, Wi-Fi 5 & 6, xDSL, & SFP+ configurations.

Encryption acceleration is supported using Intel® QuickAssist on Intel Atom® and Intel® Xeon® based platforms with DPDK providing the technology needed to accelerate packet handling by up to 10 times. As a result, secure branch connectivity, including end-to-end encryption, can be provided without compromising VNF performance or increasing costs. The 1U high-end platforms have been designed for high-availability networks with integrated fail-safe redundancy, advanced remote security, and management features that minimize system down time.
